# Narrative Design Draft:
Start Small Zoom Out

Data Story:

In Dale County Alabama, there are 20,587 total white adults vaccinated vs 411 total Asian American adults. This county had a 91.7% completeness percentage. When we zoom out we can see all the counties that are much more predominantly white have more vaccinated people, showing us a correlation.

Very White dominant counties

Vaccination rates

Heavier POC counties

Background Information:

- Our Dataset is combination of two other datasets
- This story takes place in America
- One dataset on the weekly COVID-19 vaccination rates by counties, the other demographic data by counties
- Demographic data is split into race sub-groups and age subgroups
- We are looking for a possible correlation between racial background and likelihood of being vaccinated for COVID-19
- Using zoom out data story for this visualization
- With zoom out we can see how there is a pattern within counties that are POC heavy and their vaccination rates
- two diagram shows amount of fully vaccinated adults within each racial group in the counties of the US , one specific and one vauge

Average percent of fully vaccinated adults in the United States, categorized by above average race populations in counties (July 2021)
